

高周波電力抵抗器

RF POWER RESISTORS

RFH, RFK,

RFR010-010, RFR050-010,

RFR100-010, RFR250-010

特長 用途

RFR000-000、RFH、RFKは、定格電力10Wから250W、抵抗値50Ωから800Ωのマイクロ波抵抗器。マイクロ波ターミネーション、吸収抵抗器に使用することができます。RFR000-020、RFKは裏面から、RFHは端子から、発熱を伝導します。プリント基板、マイクロストリップなどに、はんだ接合して放熱できます。RFRには、フランジ付のシリーズがあり、フランジを介して筐体に放熱できます。いずれも超高熱伝導度のセラミックスを絶縁物に使用し、高周波領域とマイクロ波領域で優れた性能を発揮し、薄膜抵抗ですから、高周波領域で誘導性がすくなく、周囲温度による抵抗値の変化がきわめて少なく安定した抵抗器です。中継器、無線基地局、のマイクロ波アンプ、アイソレータ、その他高周波電源用。

Features and Applications

RFR000-000, RFH and RFK are specified rating power of 10W to 250W, resistance of 50ohm to 800ohm for microwave applications. Heat from the resistors can be extracted through back metal or flange to PCB or case heat sink. RF application. Small sized large power handling feature shows excellent RF characteristics in equipment with RoHS compliance and Beryllium free design. 1% tolerance and 50ppm/degree tight resistances are made application circuit stable. RF power amplifiers, RF power source, fixed station of cell phone, RF measurement and terminations of circulators / isolators.
